FIS DIGITAL CURRENCIES LEDGER

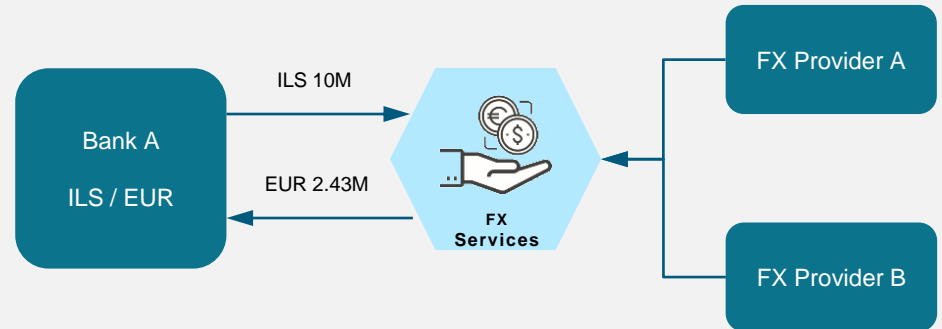

ATOMIC PVP WITH DRM

If Bank A doesn't have enough EUR to complete a payment to Bank B, Bank A can obtain EUR through the FX Service. The FX Service is an application that performs atomic settlement between currencies. There is not counterparty risk as settlements doesn't occur until both currencies have been "deposited" into the M0 accounts controlled by the application.

FX Providers provide M0 (reserves) liquidity in the currencies they service. The FX Service is powered by multiple FX Providers to create a competitive market.
